
GRAHAN
THE SEARCH FOR SUNRISE IN 2049 MUMBAI
A REAL-TIME SEARCH AND SURVIVAL GAME

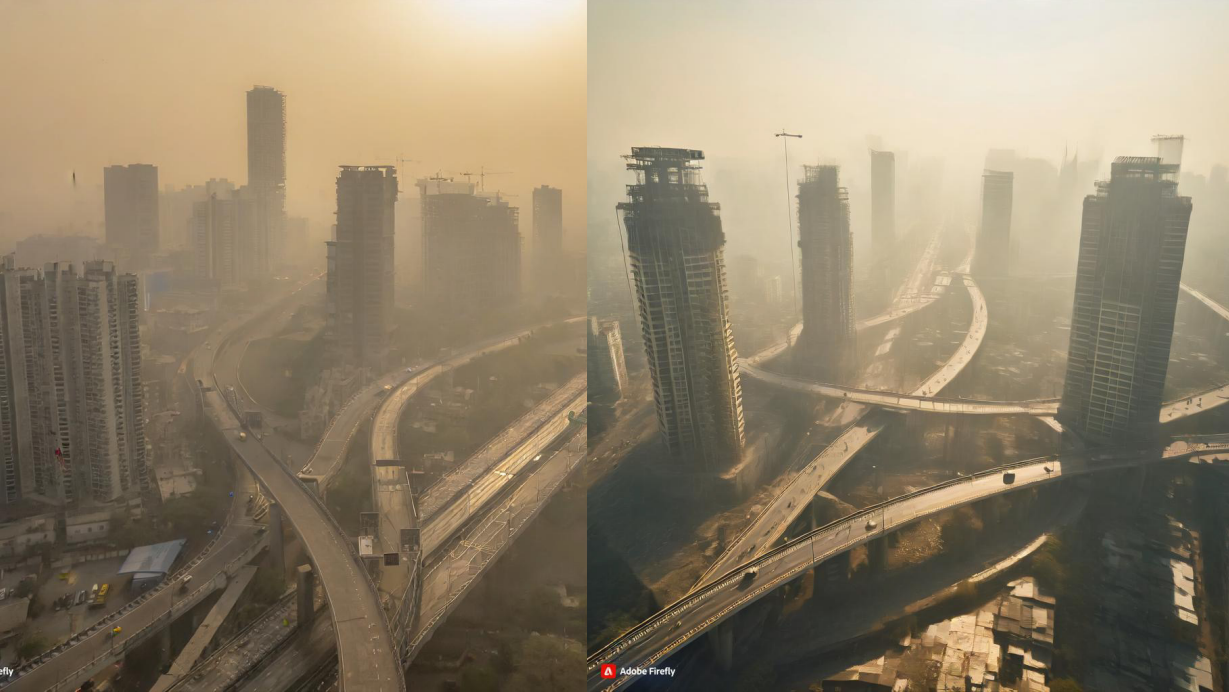

CONCEPT

It’s the year 2049 in the mega-megapolis of Mumbai. Hundreds of tall buildings. Thousands of flyovers and walkways. Blocking the sun for millions.

Welcome to the world of Grahan. Or maybe not.

Adobe Firefly

THE BEGINNING

Mithi (now 18 years) was 11 when she lost her parents. Born blind, she acquired the gift of singing. She had to look after Setu, her younger brother since he was 2. Its been 7 long tough years. She wants to leave the city now.

But Setu has never seen a real sun-rise. That is his only desire.

He climbs up to the upper levels one morning.

When it all crashes down. He is lost down below.

And Mithi has Setu's life- saving injections.

Grahan is a real-time search game for 1-3 players one of whom is Mithi and others are Setu's friends.

GAMEPLAY MECHANICS - HEALTH AS CURRENCY

HEALTH INDICATORS

The currency here is health. Most of them have limited to begin with - shown as a sun with rays disappearing one by one.

SOLAR HEALING

One can get health by standing in shafts of sunlight - more of which is available the higher you go. And you can go higher the more health you have.

BLACK MARKET

Health can also be bought illegally in the city as D-shots, like insulin jabs. But those come at utterly unpredictable costs based on who's selling.

Adobe Firefly

THE SEARCH FOR SETU - RACE AGAINST TIME

SETU'S HEALTH

Setu has a constantly diminishing health - known to us in story elements shown to all players. This is one ticking clock. Game ends if he dies. And ends when all players die.

PLAYER COLLABORATION

Mithi and Setu's friends frantic search - they have to deliver the life saving injections in time. But does it end when Setu is found?

A GLOBAL TICKING CLOCK

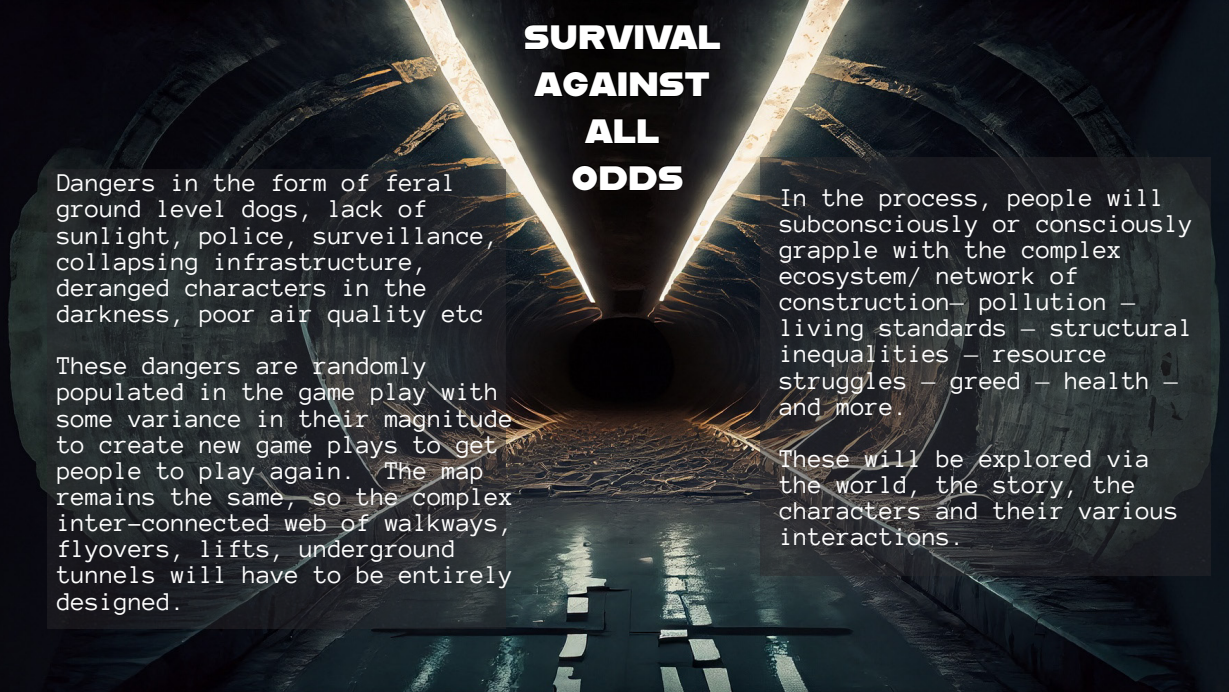

CITY ON THE BRINK

This will come from the parallel story in the game play. It is the story of how the excessive underground construction has led to a water breach and there's 24 hours for the breach to lead to a decimating flood.

This element is discovered through the game play and game is in real-time to enhance the tension of clear and present dangers.

THE PERILS OF GRAHAN

SURVIVAL AGAINST ALL ODDS

Dangers in the form of feral ground level dogs, lack of sunlight, police, surveillance, collapsing infrastructure, deranged characters in the darkness, poor air quality etc

These dangers are randomly populated in the game play with some variance in their magnitude to create new game plays to get people to play again. The map remains the same, so the complex inter-connected web of walkways, flyovers, lifts, underground tunnels will have to be entirely designed.

In the process, people will subconsciously or consciously grapple with the complex ecosystem/ network of construction– pollution – living standards – structural inequalities – resource struggles – greed – health – and more.

These will be explored via the world, the story, the characters and their various interactions.

BEYOND THE GAME - REFLECTING REALITY

URBAN JUNGLE

The complex web of a futuristic city as a reflection of today's issues.

THE GREATER NARRATIVE

Exploring themes of inequality, health, and environmental impact.

CONCLUSION - THE JOURNEY AHEAD

END GAME SCENARIOS

- Mithi finds Setu and reunite on a bridge at dawn where Setu finally sees a sunrise. And the players are able to warn the authorities in time to save millions from drowning.
- Mithi finds Setu but cannot save the city and the game begins again.
- Mithi cannot find Setu and the game begins again
- Mithi dies and the game begins again

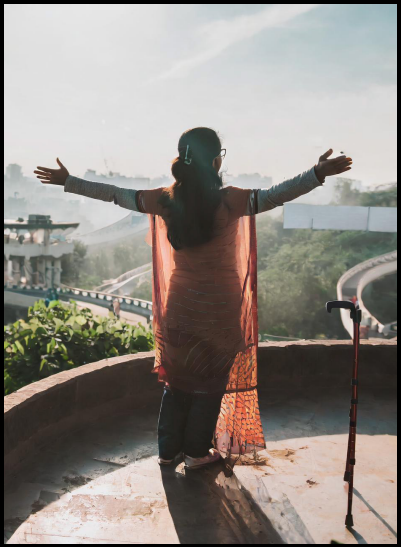

Target audience

India's PC and mobile game markets are projected to generate player spending of US$704.5 million in 2022 with 396.4 million gamers, growing to reach US$1.4 billion in 2026 with 630 million gamers

India is a mobile first market with 98.8% of gamers playing on the platform, accounting for 85% of total market revenue. Data costs in India are the lowest in the world and 5G has started rolling out this year.

Indian gamers spend an average of 14.1 hours per week on mobile games and India has the highest proportion of mobile gamers across the Asia-10 region that play over 5 hours per week.

UNIQUE SELLING POINTS

A blind protagonist which aims to create empathy for differently abled people. This character will come with heightened sound design for that player.

YA futuristic highly relevant climate fiction mobile game about Mumbai but with universal themes implying strong possibility of creating in multiple languages.

Use of a game to create awareness of relentless construction, climate and resources
